Addressing these issues requires dynamic control devices capable of real-time compensation, among which STATCOMs play a pivotal role.

Introduction to STATCOM Technology

What is a STATCOM?

A Static Synchronous Compensator (STATCOM) is a shunt-connected voltage source converter (VSC) device used for dynamic reactive power compensation in power systems. Unlike traditional reactive power compensators such as capacitor banks or reactors, STATCOMs can rapidly inject or absorb reactive power, thus stabilizing system voltage and improving power quality.
